# **Chemistry**

Class-10

Chapter-10

## **Mineral Resources: Metals and Non-metals**

Subject teacher- Syeeda Sultana Sulphuric Acid

## Uses of Sulphuric acid

- Used in the preparation of fertilizers like (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>
- Used in detergents, paints, dyes and pharmaceutical purposes
- Manufacture of plastic items like rayon, nylon etc.
- Manufacture of electrolytes eg, different batteries
- Used in petroleum refining and explosives

## Industrial preparation of sulphuric acid

Steps in preparation of sulphuric acid

• Step-1: Making sulphur dioxide
Sulphur burns in oxygenated air to form Sulphur dioxide.

 $S + O_2 \rightarrow SO_2$ 

• Step-2: Converting sulphur dioxide into sulphur trioxide

The sulphur dioxide reacts with excess oxygen in presence of a suitable catalyst such as vanadium (V) oxide or platinum and produce Sulphur trioxide at  $450^{\circ}$  C.

 $SO_2 + O_2 \rightarrow SO_3$ 

• Step-3: Converting sulphur trioxide into concentrated sulphuric acid
Sulphur trioxide passes through the heat exchanger and is dissolved in concentrated
sulphuric acid in the absorption tower to form oleum. Water is carefully added to oleum
to form concentrated sulphuric acid.

 $SO_3 + H_2SO_4 \rightarrow H_2S_2O_7$  $H_2S_2O_7 + H_2O \rightarrow 2H_2SO_4$ 

## Physical properties of Sulphuric acid

- Colourless
- Odourless
- Oily liquid in pure state
- Slightly sour in taste
- Soluble in water

## Chemical properties of Sulphuric acid

• Reaction of sulphuric acid with base/ alkali:

Base + Acid 
$$\rightarrow$$
 Salt + water

This is known as neutralization reaction

For example,

$$CaO \ + H_2SO_4 \ \rightarrow \ CaSO_4 \ + \ H_2O$$

$$FeO + H_2SO_4 \rightarrow FeSO_4 + H_2O$$

$$\begin{array}{c} 2NaOH \ + \ H_2SO_4 \ \rightarrow \ Na_2SO_4 \ + \ 2H_2O \\ Ca(OH)_2 \ + \ H_2SO_4 \ \rightarrow \ CaSO_4 \ + \ 2H_2O \end{array}$$

### Reaction of sulphuric acid with carbonate/ biarbonate salts

**❖** Carbonate/bicarbonates +  $H_2SO_4$  → Salt + water +CO2

For example,

$$\begin{array}{lll} Na_2CO_3 \ + \ H_2SO_4 \ \rightarrow \ Na_2SO_4 \ + \ H_2O + CO_2 \\ 2NaHCO_3 \ + \ H_2SO_4 \ \rightarrow \ Na_2SO_4 \ + 2 \ H_2O + 2CO_2 \end{array}$$

Arr Sulphite/bisulphites +  $H_2SO_4$   $\rightarrow$  Salt + water +SO2

For example,

$$Na_2SO_3 + H_2SO_4 \rightarrow Na_2SO_4 + H_2O + SO_2$$

$$2NaHSO_3 + H_2SO_4 \rightarrow Na_2SO_4 + 2 H_2O + 2SO_2$$

## Reaction of sulphuric acid with reactive metals

Dilute  $H_2SO_4$  does not react with metals which occur below hydrogen in the reactivity series( E.M.F. series). Metals above hydrogen react to give  $H_2$  with dilute  $H_2SO_4$ .

For example,

$$Zn + H_2SO_4 \rightarrow ZnSO_4 + H_2$$

$$Cu + H_2SO_4 \rightarrow no \ reaction$$

## Action of concentrated sulphuric acid

- Have strong oxidizing action and acts as an oxidizing agent
- It oxidizes metals and non-metals

H<sub>2</sub>SO<sub>4</sub> Oxidizes copper and produces Cu<sup>+2</sup> ion to form copper sulphate and reduces itself into sulshur dioxide

$$\begin{array}{ccc} 0 & +6 & +2 & +4 \\ Cu + 2H_2SO_4 \rightarrow & CuSO_4 + 2 & H_2O & +SO_2 \end{array}$$

## **❖** Concentrated H<sub>2</sub>SO<sub>4</sub> as a dehydrating agent

Concentrated H<sub>2</sub>SO<sub>4</sub> has great affinity for water. Hence it is used as an efficient drying agent for gases, liquids and solids which do not react with it chemically.

$$C_{12}H_{22}O_{11} + 11 H_2SO_4 (conc.) \rightarrow 12C + 11H_2SO_4.H_2O$$

$$HCOOH + H_2SO_4$$
 (conc.)  $\rightarrow CO + H_2SO_4.H_2O$ 

#### **Exercise:**

Make 10 MCQs from the lesson yourself and write down the answers of the following questions on your copy.

## **Questions:**

- 1. Describe the contact method to prepare sulphuric acid from sulphur.
- 2. Why sulphuric acid is needed to produce sulphuric acid in contact method?
- 3. Explain that H<sub>2</sub>SO<sub>4</sub> acts as an acid, oxidant and dehydrating agent.
- 4. Analyze the economic significance of sulphuric acid.
- 5. Let's take 2-3 mL lime water in a test tube and a few drops of dilute sulphuric acid to it. Observe the changes and write the reason with chemical equation.
- 6. Let's take a pinch of potassium iodide (KI) in a test tube and add afew drops of concentrated sulphuric acid to it. Write the reason of change with chemical equation.
- 7. What is oleum?
- 8. Take a spoon of sugar( $C_{12}H_{22}O_{11}$ ) in attest tube and add a few drops of concentrated sulphuric acid to it. Write the reason of change with chemical equation.
- 9. Explain the reactions given below showing that sulphuric acid is an oxidizing agent:
  - a)  $Cu + 2H_2SO_4 \rightarrow CuSO_4 + 2H_2O + SO_2$
  - b)  $C + H_2SO_4 \rightarrow CO_2 + 2SO_2 + 2H_2O$
