E. Matching:

Ans.

(a+iv)= The creek flows for about four kilometres.

(b+v)= None of the students have ever seen a fish in Pigeon Creek.

(c+ii)= There were bottles and cans, old tyres and a lot of other rubbish in it.

(d+iii)= The student stood on the bank looking at the rubbish in the water.

(e+i)= When they were big enough, they would swim to the Pacific Ocean.

F. Higher Order Skills

Think and answer:

1. **Ans.** The children learned from their Pigeon creek experience that water pollution causes a lot of damages to human, animal and the environment. As a result many animals get extinct or change their living place (like salmon fish in the story). But if people keep the environment clean, animals can have a normal life. Children also learned about the life cycle of salmon fish.
2. **Ans.** The school wanted to make the children responsible people. It thinks that student must know about the harmful causes of water pollution. So, it takes them to see the Pigeon creek. Seeing what students realised that people make environment polluted instead of keeping it clean. Finally the school ensures that the children become responsible persons by involving them in cleaning the creek and returning the salmon.

G. Re-arrange

- a) Pigeon Creek flows for about four kilometres.
- b) All they saw was muddy water.

- c) None of the students have ever seen a fish in Pigeon Creek.
- d) The fourth-graders stared at the muddy water.
- e) The school was going to help clean up the creek.
