

4. Topic: The Pigeon Creek**Lecture-2****Broad questions(Higher Order Skills)**

Think and answer

- a. What are the things that the children learned from their experiences?
- b. How does the school ensure that the children become responsible persons when they grow up?

Broad questions(Higher Order Skills)

Think and answer:

1. **Ans.** The children learned from their Pigeon creek experience that water pollution causes a lot of damages to human, animal and the environment. As a result, many animals get extinct or change their living place (like salmon fish in the story). But if people keep the environment clean, animals can have a normal life. Children also learned about the life cycle of salmon fish.
2. **Ans.** The school wanted to make the children responsible people. It thinks that student must know about the harmful causes of water pollution. So, it takes them to see the Pigeon creek. Seeing what students realised that people make environment polluted instead of keeping it clean. Finally the school ensures that the children become responsible persons by involving them in cleaning the creek and returning the salmon.
