

**Class-5**

**Subject-Mathematics**

**Chapter-11(Measurement)**

**Lecture-12**

**Short Question**

**Solution**

### Exercise

1. The price of 1 quintal rice is 5600 Taka. What is the price if one kg rice?
2. 1 kilometre = what in m?
3. 12300 gram = what in quintal?
4. Express 5 kilometre in centimeter.
5. How many times is kilometer to metre?
6. Convert 99m 30cm 5mm into mm.
7. How many quintals are there in 7654 kg?
8. 50 gram 25 centigram is equal to how many centigram?
9.  $1 \text{ m}^3 = ? \text{ cm}^3$
10. 1000 cubic centimetre = ? litre?

**Solution:**

1. 56 Taka.

Rough

We Know,

$$1 \text{ quintal} = 100 \text{ kg}$$
$$100 \text{ kg rice} = 5600 \text{ tk}$$
$$\therefore 1 \text{ " " } = (5600 \div 100) \text{ tk}$$
$$= 56 \text{ tk}$$

2. 1000 m.

3. 0.123 quintal.

Rough

$$12300 \text{ gram} = (12300 \div 1000) \text{ kg} [\because 1 \text{ gram} = \frac{1}{1000} \text{ kg}]$$
$$= 12.3 \text{ kg}$$
$$= (12.3 \div 100) \text{ quintal} [\because 1 \text{ kg} = \frac{1}{100} \text{ quintal}]$$
$$= 0.123 \text{ quintal}$$

4. 500000 cm

5. 1000 times

6. 99305 mm

Rough

99m 30cm 5mm

$$= (99 \times 1000) \text{ mm} + 30\text{cm} + 5\text{mm} [\because 1 \text{ m} = 1000 \text{ mm}]$$

$$= 99000\text{mm} + (30 \times 10) \text{ mm} + 5\text{mm} [\because 1 \text{ cm} = 10 \text{ mm}]$$

$$= 99000\text{mm} + 300\text{mm} + 5\text{mm}$$

$$= 99305 \text{ mm}$$

7. 76.54 quintal.

Rough

$$7654 \text{ kg} = (7654 \div 100) \text{ quintal} [\because 1\text{kg} = \frac{1}{100} \text{ quintal}]$$

$$= 76.54 \text{ quintal}$$

8. 5025 centigram.

Rough

$$50\text{g} 25\text{cg} = (50 \times 100) \text{ cg} + 25 \text{ cg} [\because 1\text{g} = 100\text{cg}]$$

$$= 5000 \text{ cg} + 25 \text{ cg}$$

$$= 5025 \text{ cg}$$

9. 1000000 cm<sup>2</sup>

10. 1 Litre.
