Chapter 3: The Internet in My Education

Lecture 2

The Internet in Education

Are you familiar with the word 'Internet'? Yes, we all are very much familiar with this word. You are reading this lecture using the internet. This technology has brought about a significant change to the world.

A desktop or a laptop computer is necessary to use the internet. Mobile phone technology has been upgraded and 'Smartphone' can provide the internet facilities. A recent invention is tablet. Tablet is an electronic device which is smaller than a laptop but larger than a smartphone. It can be used in education easily. Many companies are designing applications suitable for tablet to use in education.

An internet connection is required for the internet-use. A fast and high-speed internet service is required to use internet in education. But there is not much content available on the internet in the Bangla Language. Initiatives have been taken by the Government, organizations, and individual for developing content in Bangla.

Many educational contents are available on the internet. If any student can not understand anything while studying, he/she is sure to get any solution by giving a search on the internet.

There are useful websites for mathematics on the Internet in which the answers of any mathematical problem can be solved. There are some websites for watching practical of scientific experimentations. There are also some useful sites available on the Internet for teaching Bangla.

The Internet and My Academic Subjects

You have certainly noticed that all of your textbooks are available on the internet. You can download the textbooks if any book is either lost or damaged for some reasons.

NCTB publishes all the textbooks and sends it to you free of cost. Those who write these textbooks upload them on the internet. Students can download these books directly from the internet without purchasing from the market. Many writers of the world have arranged their books available on the internet.

My Career and ICT

You should be careful to develop expertise in ICT for your own career. To get any job without having preliminary skills in office software, internet, e-mail, social networking system is quite

17.10.2020

impossible now. So, you should give effort in enhancing the skills in ICT. ICT is a great field for developing career in the world.

Computer science, computer engineering, office automation system design, artificial intelligence, robotic engineering, data communication – these are only a few of the thousand possible sectors that lead to successful career in ICT.

There are other job facilities available in ICT sector. Many freelancers of our country are of global standard. Patience and in the English language are necessary for freelancing.
