Chapter-9 Lecture-1  
Class Date- 07/10/2020

### Answer

1. Medical technology helps us to determine the diseases and provide the patients with advanced treatment. Various types of medical instruments and equipment have been invented. Even the internal organs of the body can be examined by this equipment. Thus, medical technology is playing a vital role in protecting our health.

2. We use many kinds of technology in our home such as light, iron, computer, gas stove, microwave oven etc. We use elevator or lift beside the staircase for ascending or descending. There is also refrigerator for preserving food. All of this are part of technology. We depend on these technologies to make our life easier and more comfortable. We cannot even think of a moment without these technologies. Thus, these technologies in houses are making our life comfortable.

3. We use different types of technology for inventing agricultural tools such as, tractor, irrigation pump etc. We also use modern agricultural technology to produce diseases resistant and highly productive crops. We use technology in producing forest resources and creating new species of plants.

4. Science and technology is closely related. Without scientific knowledge, nothing can be discovered or invented. Again, scientific knowledge develops with the help of technology, So they are related to each other.

5. Because of technology, our life is now more advanced, easier and more comfortable.

6. With the help of plant breeding technology different colored flowers are being produced in the same plant.
