

Exrcise-3

Answer the following questions:

- a. What is food web? Explain it.

Answer: Several food chains connecting together make a food web.

In an ecosystem, there are many food chains. All the plants and animals are part of several food chains. For example, a hawk may eat a mouse, a squirrel, a frog or some other animals. The snake may eat a rabbit, a rat or some other animals. Several food chains connecting together make a food web. This is known as food web.

- b. What is food chain? Draw a picture of a food web.

Answer: Food chain:

The path of food energy in an ecosystem from plants to animals is called food chain.
